To find the average date upon which all the amounts in an account shall fall due.

RULE.—Multiply the several sums by the number of days from the date they fall due, to the last date in the account; add all the products together, and divide by the total amount, the quotient will be the number of days back from the last date: thus, the number of days from 1st May to 30th August, in the following calculation, is 121; then proceed:

							-	
Du		May,	\$120	×	121	days	=	14550
	20th		100	×	102	44		10200
	31st	44	125	×	91			11375
		June,			61	44	_	7980
		July,	210	×	36	"	=	7560
		Aug.	315	×	20	46	=	6300
	30th	66	200		-			
			1000		ł	,		
			1200					57885
							:	

and 57,885 divided by 1200, will give 48 days from the 30th August, or the 18th July, the average date.

OR THUS:

Multiply the several sums by the days between each, and proceed as above; thus:

Due May. 1	\$120		
" 20	100 ×		
" 31	$125 \times$	30 =	= 3750
June 30.	$130 \times$	60 =	7800
July 25	$210 \times$	85 =	= 17850
Aug. 10	315 ×	101 =	31815
" 30	$200 \times$	121 =	24200
	_		
	1200		87315

and 87.315 divided by 1200, will give 73, the number of days from the 1st May, or 13th July, the average date, as above.

TABLES OF INTEREST

 \mathbf{AT}

6, 7, 8, 9, & 10 PER CENT.

NOTE.

The following Tables are especially intended for the Counting-house, and exhibit an easy and expeditions mode of calculating Interest on Accounts Current.

The Rules, it is believed, will be found clear and explicit; and the examples sufficiently copious to enable the accountant at once to understaned them, and make them available.

RULES AND EXAMPLES.

THE best rule which has yet appeared for computing Interest, is by multiplying the principal by the days at which it has remained at Interest, and dividing the Product by 7800, if the rate be at t per cent. The reason why 7800 is a proper divisor is found by the following rule:—

As simple interest at 5 per cent. upon any Principal, will, in 20 years, be equal in value to such Principal, and there being 7300 days in 20 years, so \$1 at Interest for that time will gain \$1. In like manner, a greater sum, for a less time, will gain \$1, for every time 7300 can be taken out of the Product arising from the Principal being multiplied by the days it has remained at Interest.

un-

of

cit:

un-

ble.

EXAMPLE.

To find the Interest of \$1 for 20 years, at 5 per cent. per annum:—

Days in 20 years.................20
$$\times$$
 365=7300
And 7300 $\stackrel{.}{-}$ 7300=1 or \$1;

Or,

To find the Interest of \$292 for 100 days at 5 per cent. per annum:—

 $292 \times 100 = 29200$ $29200 \times 7800 = 4 \text{ or } \$4.$

The time when Interest, at the rates in this Work, will equal any Principal, is found by the annexed Table, which arises from the following rule:—

As the Principal: 100 :: 1 year: time.

		•				
Per Cer	nt.					Time.
5	100 ×	5 =	500			A IME.
					000 ÷ 500	20 years.
6	100 ×	6 ==	600			•
	100	100	10000	and 10	000 ÷ 600	162 years.
7	100 ×	7 =	700			
	100	100	10000	and 10	$000 \div 700$	14; years.
. 8	100 ×	8 =	800			
				and 10	000 ÷ 800	12½ years.
• 9	100 ×	9 =	900			
	100	100	10000	and 10	000 ÷ 900	11! years.
10	100 ×	10 =	1000			
	100	100	10000	and 100	000 ÷ 1000	10 years.

By the forgoing Table, we are not only enabled to find divisors for the whole rates, but also the exact sum which will give One Cent per diem Interest.

The divisors are found by the following Rule:

As 20 years are to the days in 20 years, (or as 1 year is to the days in 1 year), so is the number of years by the foregoing Table, in which the Interest will equal the Principal, to the divisor required.

EXAMPLE.

To find a divisor for 5 per cent:—	
Days in 20 years	7300 days.
Time when the Interest will equal the principal	•
at 5 per cent. by the foregoing Table	20 years.
Number of years	20
$7300 \times 20 = 146,000$, and $146,000 \div 207300$	
the divisor for 5 per cent.; Or,	
Days in 1 year	865
Time when the Interest will equal the Principal	
at 5 per cent	20 years.
Year	1
$865 \times 20 = 7800$	-

The sum which will give One Cent per diem, is found for the different rates by dividing each divisor by the number of Cents in One Dollar.

EXAMPLE.

What sum will give One Cent per diem Interest at 5 per cent. per annum?

Divisor	for 5 per	cent	7800
Cents in	\$ 1		100

 $7300 \div 100 = 73$ Cents.

Agreeably to the Rules above-mentioned, the following Table shows divisors for the different rates, and also the sum which will give One Cent of Interest per diem at each.

ind ich

to real,

RATE THE CHIT. IN	DAYS IN ONE TRAR.		TIME TABLE.			PRODUCTS.		BIVISOES.		CENTE IN	9	WHICH W	SERIE WHICH WILL GIVE OFF
	365	×	20	yr.	yrs. ==	7,300	and	7,300	·ŀ	100	11	73	Dollare
	365	×	16	33	11	6,0834	and	6,0834	1	100		909	3
	365	×	149	3		5,214, 8	and		• •1	100	t	591	3
• • • • • • • • • • • • • • • • • • • •	365	×	124	"	-	4,5621	and		۰ ۱	100	ı	45.	3
	365	×	111	39		4,055		4.0555		100	11	408	3
	365	×	10	33		3,650	and	3,650	٠ .ا	100	-	961	3

Having, by the above Table, found what sum, at the different rates, will give One Cent per diem of Interest, these become the radix of each Table; and they are carried progressively forward, until they arrive at such an amount that, in ordinary business, the Interest due upon any sum may be easily found and all fractions saved.

At 10 per Cent. \$46.20.

It now remains to illustrate the applicability of the Tables, in shewing the Interest due upon Cash Accounts, Accounts Current, Bills, Receipts, &c., &c.

The following are supposed Accounts betwixt a Merchant and his Banker. The one exhibits a Balance always in favour of the Merchant; the other, sometimes in favour of the Merchant, and sometimes of the Banker.

The amount, at the rate allowed by the Bank, being deducted from the amount charged by it for the accommodation, and the difference being then added to the Account, shows the balance due to the Bank.

An Account Current is so similar to the above, that it is not considered necessary to insert an example of one.

If the Discount upon a Bill for \$730, which has 50 days to run before it arrives at maturity, is required, by the forementioned Rule.

Turn up any of the Tables, and opposite 36500 you have the answer.

If the Interest due upon a Receipt for \$600, which has remained at Interest for 73 days, is required,—

and opposite this number (43800) at the rate per cent. allowed, the answer is given.

From the foregoing illustrations, we have the following

GENERAL RULE:-

To find the Interest of any sum, multiply the time and the amount together, look for the product in the Table, at the rate required, and in the adjoining column you have the answer.

TABLES

O P

DOLLARS AND CENTS,

REDUCED TO STERLING,

FROM 4 TO 12½ PER CENT.

NOTE.

The following Series of Tables has been undertaken at the suggestion of a number of the Author's friends.

Each page exhibits at one view the exact value in Sterling, at the rate stated, of any sum from one Cent to One Thousand Dollars. The calculations have been made with all possible care, and the Author ventures to hope that while his aim has been to prepare a useful work, a discerning Public will show its appreciation of his labours.

At 4 per Cent advance.
